Design, SQL Server &  
ADO.NET

VS Extension  
Development

CSLA

Prism, MVVM

Azure

Javascript +  
Typescript

WPF, WinForms,  
ASP.NET, WCF,  
ASP.NET Core

## Profile

I am a highly motivated developer, who is adept at overcoming technical challenges, and helping organisations and teams navigate technical hurdles and transitions. I like to innovate, with a focus on streamlining delivery and improving quality. I have experience architecting software solutions that span multiple logical and physical tiers. I have experience architecting high performance software and websites that scale elastically. I am the person that starts at an organisation that has been manually deploying their 15 year old massively complex and antiquated legacy system, and 3 months later, I have driven the adoption of a fully automated CI / CD process running on docker or in the cloud so that value is now being delivered continuously, consistently, and relatively effortlessly. I do not consider my job done once my code is checked into source control. I consider my job done well, once fully tested and high quality code is being shipped into production (not just from me, but from the entire team) - along with the right telemetry and monitoring to help inform the business and drive continuous improvement.

## Employment History

Lead Application Developer at Reach Contact Field Marketing, Woking  
[April 2015](#) – [Present](#)

Senior Developer at Silverbear, Guildford  
[January 2011](#) – [April 2015](#)
